Artificial Intelligence

Artificial Intelligence (AI) is a branch of computer science that focuses on creating systems capable of performing tasks that normally require human intelligence.

Machine Learning

Machine Learning is a subset of artificial intelligence. It allows computers to learn patterns from data and make predictions without being explicitly programmed for every task.

Generative AI

Generative AI refers to AI systems that can generate new content such as text, images, audio, video, and computer code.

Applications of AI

AI is used in healthcare, education, finance, transportation, robotics, construction, and many other industries.

AI in Construction

Artificial intelligence can help construction companies with cost estimation, quantity estimation, scheduling, risk analysis, and project management.
